RE: PATENT APPLICATION
TITLE: VERSATILE AXIAL FAN AND CENTRIFUGAL SHUTTER MECHANISM
Patent Application N. 10/679.475

Mr. Verdier,

It was nice to speak with you last week. Please find enclosed documents concerning the fan of the above application.

Just after our phone conversation, I received the final comment for my Canadian Application therefore, I include herewith:
1) A preliminary document with revised claims similar to the one that I just sent to the Canadian examiner of the Canadian patent application No. 2,405,088.
2) The abstract of the application.
3) A document described the ANGELO 56" FAN as was built. This document is a summary of the specification and helps to understand the invention.

I would like, if possible, to have your email address to send the specification and claims as are almost accepted by the Canadian Patent Office examiner and in addition to send pictures of the fan showing the fan with the shutter assembly with vanes having their axis of rotation extending vertically and the same shutter installed with vanes with their axis of rotation extending horizontally as on fan of prior art. With my square shaped removable shutter the farmer is able to install the shutter in either way.

If you require additional information, please do not hesitate to contact me.

Sincerely,

Angelo Milana P.Eng.
